ULDrone

The ULDrone plugin integrates drone control into Genetec Security Center, enabling mission execution, alarm response, and real-time data monitoring. This solution ensures efficient management and quick responses to critical incidents.

FEATURES

- **Direct integration with Genetec Security Center** to manage drone operations.

- **Real-time visualization of drone telemetry and live streams** via RTSP video sources.

- **Automated mission** execution triggered by predefined alarms.

- **Full drone control**, including mission pause, resume, return to base, and emergency landing commands.

- **Operator privilege** assignment capabilities.

PART NUMBER AND SDK CONNECTIONS

- Requires two SDK connections with part number GSC-1SDK-SAN2-ULDRONES, plus one additional connection for each extra operator workstation.

EXTERNAL REQUIREMENTS

- Drones compatible with ULDrone software, supporting real-time telemetry and video streaming.

- Drones must allow control via REST or WebSocket for mission management.
