DORLET INTEGRATION IN GENETEC

The Dorlet Integration plugin for Genetec is an extension for Genetec Security Center that enables the **incorporation of Dorlet's existing access control system into Genetec.** It allows operation and event reception of the access control system directly in Genetec.

FEATURES

- **Import of the access control topology** (ASD/2 access control units, doors, and EVOpass 20 card readers) from Dorlet into Genetec. Topology modifications are made only in Dorlet.

- **The plugin imports cardholders**, their card credentials, license plates, companies, and routes from Dorlet into Genetec.

- **Creation and modification of cardholders** in either Genetec or Dorlet, with permanent synchronization of cardholders, credentials, companies (cardholder groups), and routes (access rules) between Dorlet and Genetec.

- **Reception of access control events** in Genetec.

- **Sending of manual door unlock** commands from Genetec.

PART NUMBER AND SDK CONNECTION

- Requires two SDK connections with part number GSC-1SDK-SAN2-DORLET, plus one additional connection for each extra operator workstation.

EXTERNAL REQUIREMENTS

- Dorlet access control infrastructure (Dorlet DASSnet software version 2.6.4 and the aforementioned Dorlet access control hardware).

- Dorlet license for communication with other systems.
