

iSENTRY - FIREFLY

The Firefly - Genetec integration enables the transmission of video analytics data from Intelxvision devices to Genetec Security Center. This solution includes a Gateway that collects data from Firefly and sends it to Genetec, and a Genetec Plugin that receives alerts, creates custom events, bookmarks, alarms, and bounding boxes on the video stream.

FEATURES

- **Transmission of video analytics** data from Intelxvision devices to Genetec Security Center.
- **Creation of bounding boxes** on video streams based on alerts.
- **Configuration and management of custom events** within Genetec.
- **Compatibility with multiple Firefly** instances via REST API.

PART NUMBER AND SDK CONNECTIONS

- One SDK connection of part number GSC-1SDK-SAN2-INTELEXFIREFLY is required for each system you want to install.

EXTERNAL REQUIREMENTS

- Gateway service configured with access to the Firefly REST API.
- Customized JSON configuration file to set endpoints and parameters.
- Stable network connection for communication with Firefly devices.
